

ABOUT

NEW ENGLAND ARBORISTS, LLC

New England Arborists, llc, was started as a result of property owners' question, "Can my tree be saved?" More often than not, tree service companies will remove trees and shrubs as an only option. These companies market the healthy timber on your property to wood brokers and use the rest for firewood and other by-products. New England Arborists views removal as the absolute last option.

Many property owners are unaware that trees and shrubs can be treated for diseases just like humans. There are products produced for specific pest and disease control of a particular tree species just like there are products available for the common cold.

Terry Ryan and Patrick Morse are veterans to the tree business, with over 20 years combined experience. Terry and Patrick worked for a tree service in the area before starting NEA, llc in June, 2008 to fill the void in the market for proper tree care.

TOP 10

MAN-MADE TREE KILLERS

- Soil Compaction and root damage
- Topping and harmful cuts
- Over-thinning
- Over-watering
- Neighboring tree removal
- Planting too deep
- Wrong plant/wrong place
- Bark injuries to trunk
(weed whackers, lawn mowers)
- Poor cabling & damage repair
- Over-fertilizing or treatment

**TREATING JUST ONE
TREE OR SHRUB AFFECTS
EVERY
OTHER PLANT IN THE
LANDSCAPE.**

WHAT IS PLANT HEALTH CARE?

Plant health care is a proactive approach to tree care by the proper pruning of trees and shrubs. This practice provides suitable air flow that can dry out any possible fungal issues. It also removes dead, dying or diseased limbs that can lead to disease spread. Proper fertilization keeps a tree or shrub vigorous resulting in less susceptibility for insect and disease problems. Regular inspection of trees and shrubs is necessary to keep insect and disease damage minimal and manageable. An arborist has an understanding of tree and insect biology which aids to predict any defects a tree or shrub may suffer as well as knowing the best time of year to treat any fungal or insect issues.

By practicing Plant Health Care, the amount of toxic pesticides released into the environment is reduced drastically. Because Plant Health Care is a preventative approach, the plant and its requirements become the central focus rather than response to symptoms.

Simply put, preventative care, frequent monitoring, early detection, informed decision making and integrated treatment plans lead to the healthiest trees and shrubs.

Maintaining a plants health can be the best defense against insects and disease.

SERVICES WE OFFER

- **FREE WRITTEN ESTIMATES**
- **TREE AND SHRUB PRUNING**
- **RESTORATION PRUNING**
- **SOIL ANALYSIS**
- **INSECT & DISEASE CONTROL**
- **FERTILIZATION**
- **CABLING**
